Which customer needs shape the next vehicle?

Evidence to requirements. PMs in control.

Customer feedback

Spreadsheets and studies

Product data

Catalogs, options and sales

Market research

Rival products and trends

From scattered sources to a requirement the PM can defend.

A shared evidence base. Every source stays traceable.

13,771

Customer comments

Loaded from the provided BMW files.
Original file and location preserved.

1,627	Customer-study cells
198	Equipment options
149	Catalog text passages

China has study and sales data, but no customer feedback in this dataset.

AI proposes.
The PM decides.

"What should improve for the next G60 in the US?"

Ask → Plan ⇢ Review ⇢ Draft

Choose the vehicle, market and question.

See the agents and why they matter.

Inspect each cited contribution.

Turn accepted evidence into a requirement.

Accept | **Edit** | **Retry** | **Reject**

Backend: runner + Critic + PM actions. Next: connect the live frontend.

Every priority has a reason.

Source row or page → **Retrieved evidence** ⇢ **Proposed requirement**

PM-EDITABLE SCORING

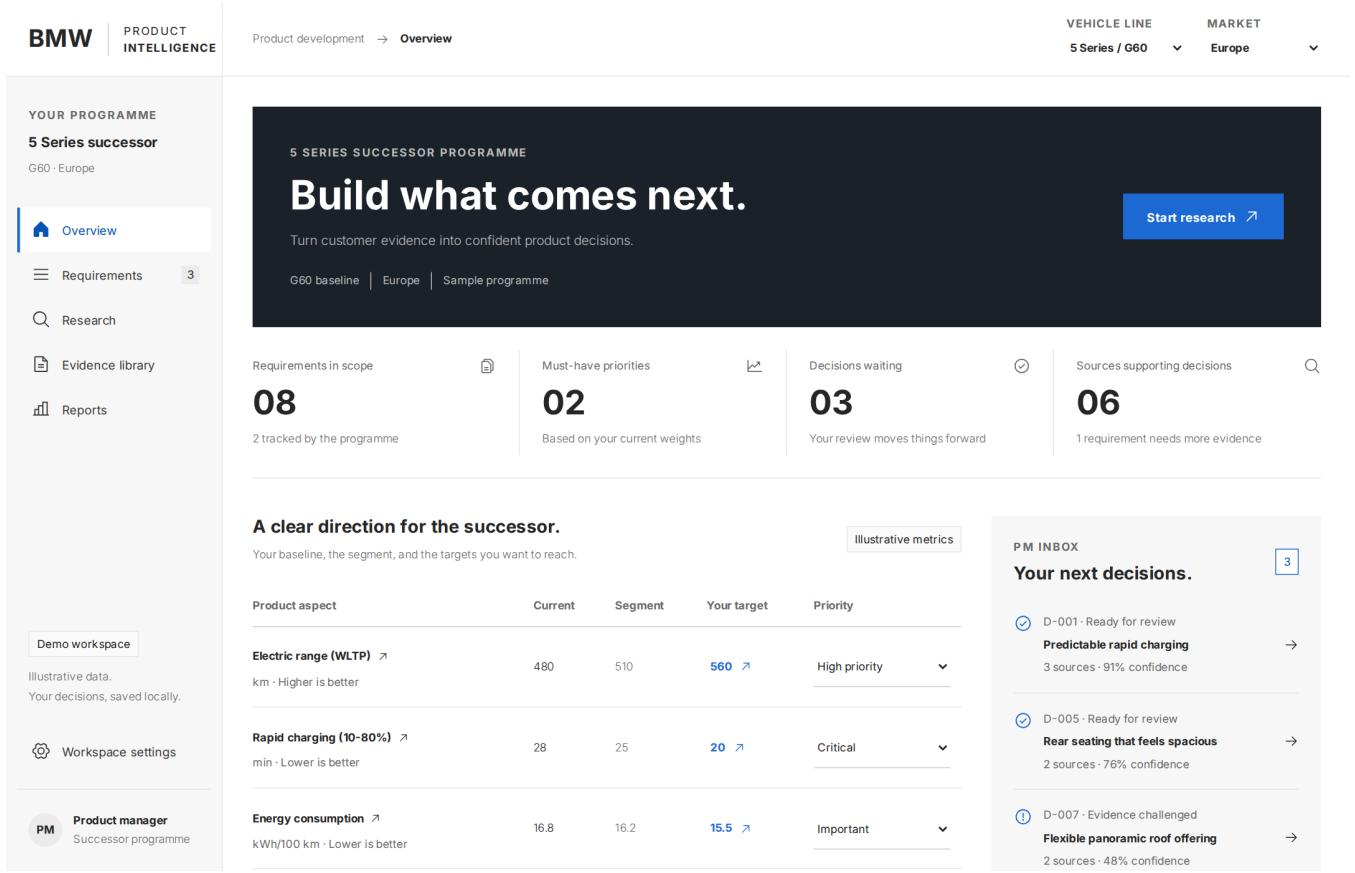

Customer relevance
Business signal
Strategic fit
Effort

Priority and confidence stay separate.

High potential, thin evidence stays visible.

PM decisions record what changed and why.

A working foundation.
A clear next step.

Actual deployed workspace. Clearly labeled illustrative data.

IMPLEMENTED BACKEND

Cited search and planning
Agent runner + Critic
PM review endpoints

FRONTEND DEMO

Targets, requirement reviews and reports on sample data.

NEXT: UI wiring + backlog writes

Pilot one vehicle line.
Make the decision traceable.

Wire the workspace, then measure:

01

Time to a cited draft

02

Evidence coverage

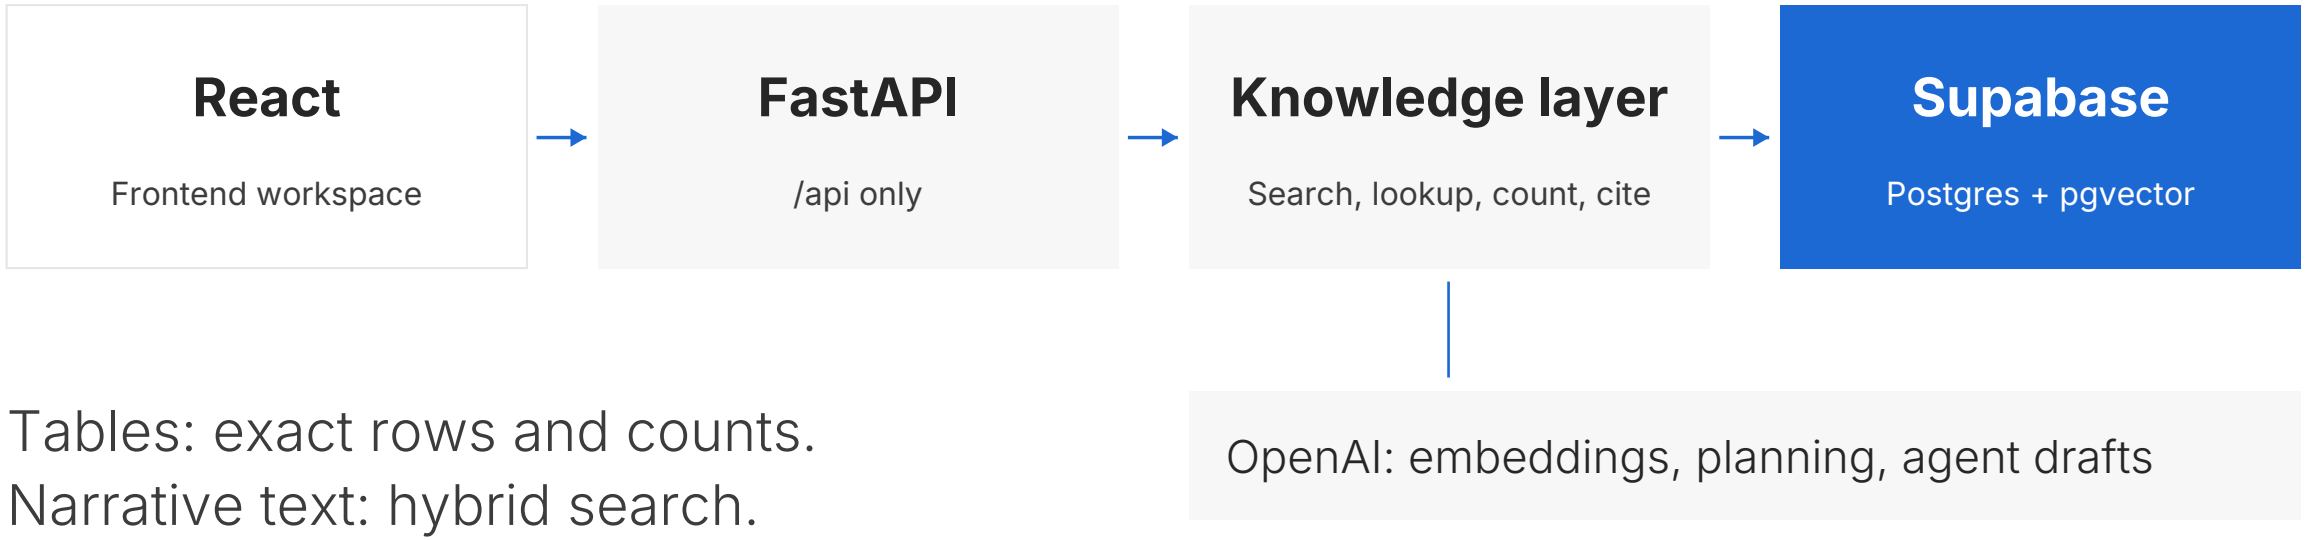

03

PM review effort

bmw-product-intelligence.vercel.app

Try the static demo. Live evidence and planning run with the local backend.

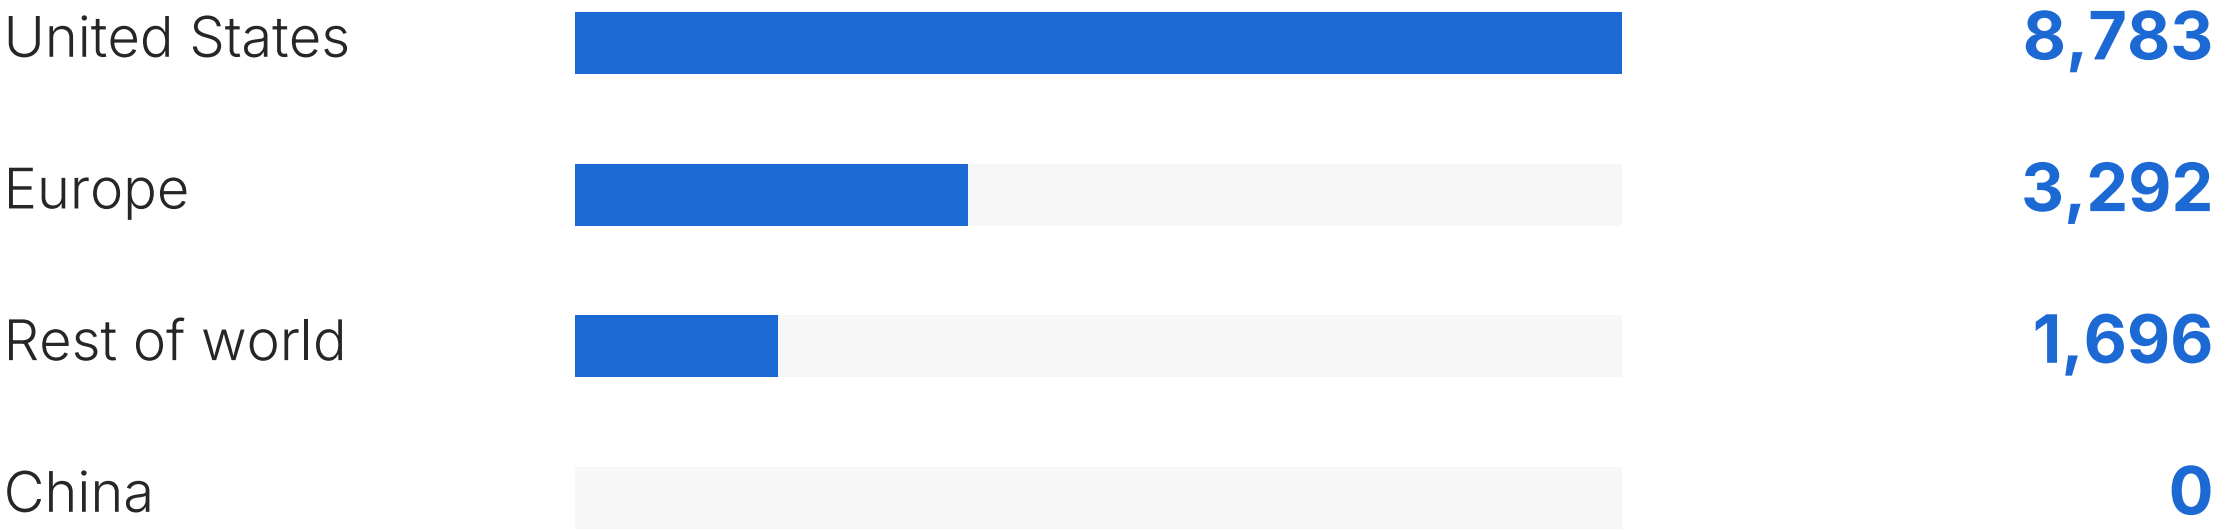

One evidence layer.
A backend the PM can inspect.

Tables: exact rows and counts.
Narrative text: hybrid search.
Every retrieval hit keeps its citation.

Runner + Critic implemented. Next: frontend wiring, backlog writes and recovery.

Evidence is uneven. We show the gaps.

Customer-feedback comments. China still has customer studies and sales data.

Study cells are not respondents. Sales forecasts are not observed outcomes.

What works today. What comes next.

CAPABILITY	STATUS	WHAT IT MEANS
Ingestion + cited retrieval	**Live backend**	Source files, locators, exact counts
Sources + coverage + planner	**Live backend**	Editable plans; code validates prerequisites
All roster agents + runner + Critic	**Implemented**	Fixture-tested; full live validation pending
Targets, reviews and reports	**Fixture demo**	Working workspace on sample data
Audit persistence	**Partly wired**	Audit events + step output; no backlog writes
Live review UI + backlog persistence	**Next**	Connect reviews; store accepted results
Recovery + recurring refresh	**Roadmap**	Resume interrupted work; refresh evidence

Scope: customer-facing requirements. Engineering, homologation and pricing business cases stay outside.
