Which customer needs should shape the next vehicle?

Cited research across feedback, product data and the web.

> Ask a question. Inspect the evidence.
> Make the product decision.

Gabriel Hansmann | attention_is_all_we_have

A real evidence base.
Every number comes from Supabase.

13,771
customer-feedback comments

11 registered sources
8 internal files + 3 web sources

Original file, row or page stays attached.

1,627 customer-study cells

198 equipment options

149 BMW catalog passages

49 stored web passages

Ask once.
The orchestrator chooses the agents.

Example question: What do US G60 owners dislike about comfort?

01

Ask

Vehicle, market
and research question

02

Decide

Choose one agent;
validate prerequisites

03

Check

Run the agent;
verify its citations

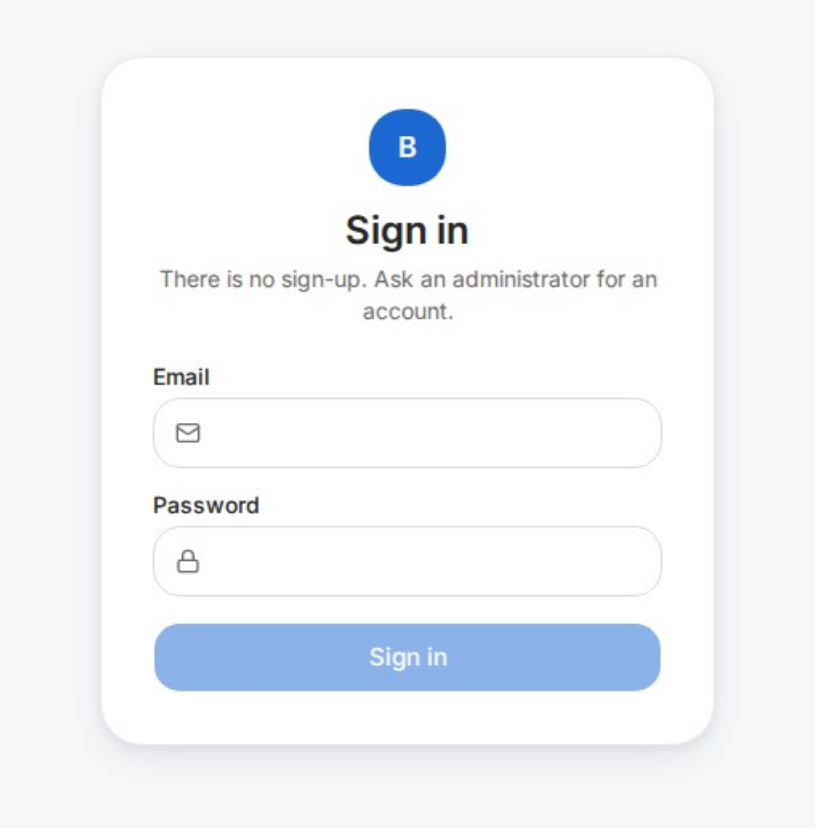

04

Answer

Cited results
and visible reasoning

The loop reacts to results. No manual approval of agent steps.

The app is deployed.
Its frontend and backend are connected.

Actual Vercel screen, captured 21:01 UTC

Research

Chat, agent decisions and cited results

Evidence

Filtered search and exact grouped counts

Sources

Registered files and market coverage

Verified: database healthy; hosted build matches main.

A concrete signal.
A source the PM can inspect.

139

negative comments

G60 / US
Comfort & Space
396 comments in this category

ONE STORED CUSTOMER COMMENT

“having to reach the heated steering wheel through the climate options feels cumbersome and they miss having a dedicated button.”

G60_feedback_hackathon.xlsx
sheet Feedback_Explorer, row 361 (G60-0287)

The count covers the category; the quote supports one specific issue.

Pilot one vehicle line.
Measure the value of cited research.

01 **Time to a cited answer**
Compare with the current research process.

02 **Citation correctness**
Check source, context and market relevance.

03 **Evidence coverage**
Keep missing evidence visible.

bmw-product-intelligence.vercel.app

Live app. Sign-in required. Prototype limits are listed in Q&A.

One evidence layer.
A visible chain from source to answer.

Shared tools: search, lookup, count and cite

—

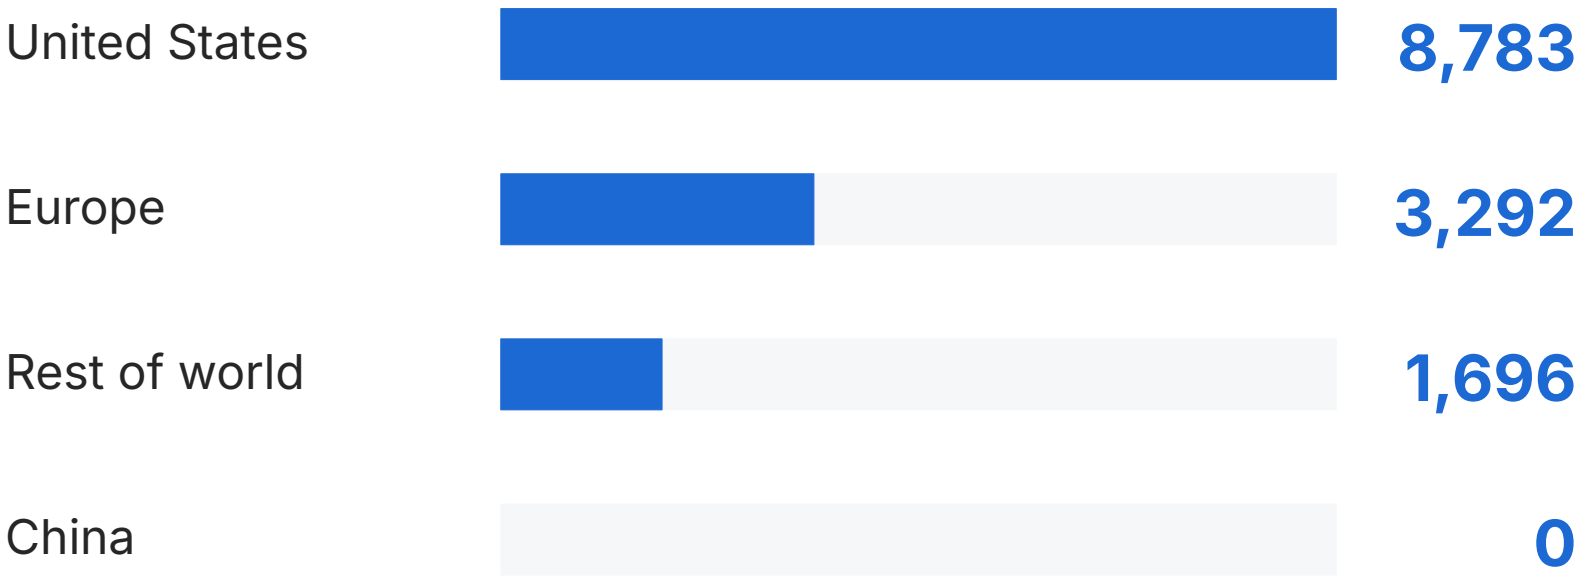

Supabase

Postgres + pgvector

LangGraph loop + Critic checks + Postgres checkpoints

Current hosting: in-process research, 300-second function setting.
A durable worker remains a next step for longer runs.

Coverage is uneven.
A source tag still needs review.

China has study and sales data for G68 / G70; no customer comments.
Study cells are not respondents. Forecast sales are not observed sales.

REVIEW BEFORE USE

Genesis G70 page tagged as G70.

Vehicle identity and market relevance need validation.

What the evidence proves. What still needs validation.

CAPABILITY	STATUS	VERIFICATION / LIMIT
Public app + DB health	**Verified**	Live frontend, DB ok, auth boundary enforced
Research / Evidence / Sources	**Shipped in main**	Frontend bundle matches deployed main
Orchestrator + Critic + resume	**Shipped code**	Full authenticated hosted run not exercised
Stored execution history	**Observed in DB**	5 completed runs; 1 older run in progress
Requirement backlog + original files	**Incomplete**	Backlog tables empty; hosted originals absent
